

TECHNICAL DATA SHEET

CL440W / CL440 / CL440B

2K FILLER - WHITE / GREY / BLACK

DESCRIPTION

CL440 (medium grey) / CL440W (white) / CL440B (black) are part of the Challenger repair system. These robust, high solids universal fillers have very wide application windows and deliver excellent vertical stability as well as outstanding filling power and adhesion. The colours can be used on their own or can be mixed together to deliver the optimal undercoat colour for the subsequent topcoat colour. They provide great topcoat holdout of Challenger topcoats.

FEATURES

- Simple to apply
- Excellent vertical stability
- Easy to sand
- Very good adhesion
- Can be converted to non-sanding versions with CL330

PRODUCT LIST

- CL440 2K Filler Grey
- CL440B 2K Filler Black
- CL440W 2K Filler White
- CL640 Hardener Fast
- CL650 HS Hardener Medium
- CL680 Hardener Slow
- CL705 Reducer Fast
- CL710 Reducer Medium
- CL715 Reducer Slow
- CL330 Non-sanding Additive

TECHNICAL DATA SHEET

2K FILLER - WHITE / GREY / BLACK

Challenger®

Product preparation - application STANDARD SANDING

It is strongly recommended to use appropriate personal protection equipment during application to avoid respiratory, skin and eye irritation.

Wash Primer or epoxy primer
Old or original paintwork well sanded and cleaned
OEM Primer (e-coat), sanded and cleaned
Surfaces pretreated with 2K polyester products and then finely sanded and cleaned
Glass fibre reinforced polyester substrates, free of release agents, sanded and cleaned.

Product mix

Mixing ratios with special agents are available in the productmix table on Colour Channel and in the specific TDS.

60 - 80 µm per coat

Clean after use with a suitable solventbased guncleaner.

Remarks

- Material has to be at room temperature (18-25°C) before use.
- Mix thoroughly and put can on mixing machine.
- Allow additional time for preheating up to panel temperature.
- When isolating certain spots - even on problem substrates - the best results are achieved with a medium film thickness of 80-120µm in 2 coats, after either air drying overnight or force drying/IR drying. With problem substrates, careful pretreatment is necessary and the Filler must be applied to the entire area.
- For dry film thicknesses of more than 150 micron air dry overnight at 20°C or 40 minutes at 60-65°C.
- Surplus ready for use material should not be returned to original can.
